RESEARCH INTERESTS & CURRENT PROJECTS

- A predictive processing approach to understanding mind and brain
- The nature and dynamics of affective processing, including the structure of affect, the neurobiology of affect and how it changes with age and disease, individual differences in affective reactivity, and how affect supports memory and perception
- The theory of constructed emotion, including the conceptual system for emotion (including how emotion knowledge is represented and structured in the mind and the brain) and the role of language and conceptual knowledge about emotion in constituting the experience and perception of emotion
- Cultural variation in emotion, with a focus on small-scale, remote societies
- Sex differences in emotion, including the influence of ovarian hormones on brain connectivity, with corresponding changes in memory and experience
- The evolution of emotion from an evolutionary-developmental (evo-devo) neuroscience perspective
