RESEARCH INTERESTS & CURRENT PROJECTS

- An active inference approach to brain:mind mapping using constructionist principles
- The nature and dynamics of affective processing (including the structure of affect, the neurobiology of the affect system and how it changes with age and disease, individual differences in affective reactivity, and how affect supports cognitive performance and perception)
- Redefining the function of limbic cortices in the broader dynamics of the brain
- The conceptual system for emotion (including how emotion knowledge is represented and structured in the mind and the brain).
- How language and conceptual knowledge about emotion shape the experience and perception of emotion.
- Sex differences in emotion
